

VW Community Safety Transporter

This VW T5 has a powerful music system, a rear screen and internal screen with a DVD player for each. It also has PA and A/V presentation capabilities. It is designed to act as the hook to engage with a target audience. This then gives the community safety advocates the opportunity to engage and educate the audience in their environment and at congregation points.

This vehicle is a particularly useful tool for more generic community events, focus weeks and more generalised road safety interventions. It has huge benefits if you are trying to engage with a large target audience; due to the PA capabilities. It has the space to invite an audience inside the vehicle to educate via DVD resources or a more formal presentation via a laptop. The roof can be raised to allow a presenter to stand inside as well as giving ventilation and light to the inside of the vehicle.

The VW T5 Driving Simulator is more appropriate to be used at specialised RTC reduction events; where an engagement; particularly with young drivers can be used to address driving issues, attitudes and behaviours; with the target audience.

Any engagements or events we attend with the vehicles need to be evaluated. The evaluation forms are in all the vehicles and need to be completed as part of the handover process when returning the vehicle. Please also include and positive or negative comments you receive from your audiences.
